## Assignment 5: CI/CD Continuous Integration and Continuous Delivery

### Jenkins Pipeline

Jenkins Pipeline is a suite of plugins which supports implementing and integrating continuous delivery pipelines into Jenkins.

A continuous delivery (CD) pipeline is an automated expression of your process for getting software from version control right through to your users and customers.

- Every change to your software goes through a complex process on its way to being released.
- This process involves building the software in a reliable and repeatable manner, as well as progressing the built software through multiple stages of testing and deployment.

### Integrating Jenkins

- We took a very simple software .
- We pushed the code on github repo and then started the main process of
- integrating it with the jenkins server locally.

### Steps followed in order to integrate the jenkins server with our software.

- 1. At first we started the jenkins server and navigated to localhost:8080 on our local machine.
- 2. Now from this jenkins dashboard we clicked on manage plugins tab and navigated to the main settings screen.
- 3. There is an additional step of setting up the go installer in the jenkins

- as we can see from the pic.

The screenshot shows the Jenkins web interface for a pipeline named 'cicd-pipeline'. The left sidebar contains navigation links: Back to Dashboard, Status, Changes, Build Now, Configure, Delete Pipeline, Full Stage View, Open Blue Ocean, Rename, and Pipeline Syntax. The main area displays the 'Pipeline cicd-pipeline' status, including a 'Recent Changes' section and a 'Stage View' table. The 'Stage View' table shows the following stages and their durations:

Declarative: Checkout SCM	Declarative: Tool Install	Build	Test	Deploy
3s	280ms	4s	4s	4s

Below the table, the 'Permalinks' section lists the following links:

- Last build (#3), 5 hr 30 min ago
- Last stable build (#3), 5 hr 30 min ago
- Last successful build (#3), 5 hr 30 min ago
- Last completed build (#3), 5 hr 30 min ago

The 'Build History' section at the bottom shows a list of builds with columns for build number, status, and time. The first build is #3, dated Apr 22, 2021, 4:18 PM, and the second is #1, dated Apr 22, 2021, 4:14 PM.

## Manually tag builds

Jenkins can tag builds automatically as a post build action or you can manually tag of a build. The Tags are stored in the PerforceHelix Core server as automatic labels with the label view based on the workspace at the time of tagging. For information about tagging a build with a Post Build Action.

**Console Output:** When your build is complete, you can view a detailed log of the build from the console output. If you need to contact Perforce Support about build problems you will need to supply the console output for the build to help them to diagnose any issues.

### *View the console output:*

- From the Jenkins dashboard, click the job link name from the table.
- Click the build number in the Build History table in the sidebar.
- Click Console Output in the sidebar menu. The console output is displayed:
